PROFESSIONAL SUMMARY

Data Science student with over 3 years of hands-on experience in data analysis, inventory tracking, and automating repetitive work with Python. I enjoy turning messy spreadsheets into clear dashboards and building ML models that actually answer a business question. Comfortable across Python, SQL, and Google Looker Studio, and currently ranked #1 in Programming among Amity University Online learners on GeeksforGeeks.

SKILLS

Programming: Python

Machine Learning: Classification, Time-Series Forecasting, Feature Engineering, Scikit-learn

Data Analysis: EDA, Statistical Analysis, Data Cleaning and Preprocessing

Visualization: Matplotlib, Seaborn, Google Looker Studio, Power BI

Databases: PostgreSQL, SQL

Tools: Git, GitHub, Kaggle, Google Sheets, Jupyter Notebook, Excel, Vercel, Hugging Face, Streamlit

Other: Inventory Management, Report Writing, Problem Solving, Communication

WORK EXPERIENCE

Data Analyst

Sumit Homeopathic Store, Lucknow – Jan 2022 to Present, Full-Time

- Went through monthly sales and inventory records for 200+ products to spot top sellers and cut down slow-moving stock by about 25%.
- Built and maintained dashboards to track revenue, stock turnover, and product demand, which made day-to-day decisions faster and easier.
- Set up 3 weekly reports to run automatically with Python and Google Sheets instead of by hand, freeing up around 5 hours a week.
- Cleaned up purchase records and ran basic statistical checks, which made procurement forecasts noticeably more reliable.
- Used the resulting insights to guide buying decisions, helping trim excess inventory costs by roughly 20%.

EDUCATION

Bachelor of Computer Applications (BCA) – Data Science Specialization

Amity University Online | Jul 2023 – Jul 2026 (Expected) | CGPA: 8.23 / 10.0

Coursework: Machine Learning, Database Management Systems, Statistics, Python Programming

PROJECTS

Electricity Consumption Forecasting

Tech: Python, NumPy, Pandas, Matplotlib

- Built a time-series model to forecast electricity usage; got the MAE down by about 22% compared to a simple baseline.
- Cleaned and explored a dataset of 10,000+ records before feature engineering to make the predictions more dependable.
- Checked model accuracy with RMSE and MAE, and put together 8 charts to walk through the results.

Diabetes Prediction App

Tech: Python, Pandas, Scikit-learn

- Trained a classification model to predict diabetes from patient data, landing above 85% accuracy on the test set.
- Handled the whole pipeline myself – cleaning, feature selection, training, tuning, and evaluation.
- Wrapped it in a simple interface so predictions could be checked in real time instead of manually.

Wave Shoes Store Analytics Dashboard

Tech: Google Looker Studio, Google Sheets

- Put together a BI dashboard covering a year of retail sales data and found the 3 categories actually driving revenue.

- Cleaned and reorganized roughly 5,000 rows of raw sales data in Sheets before it went into the dashboard.
- Added KPI tracking for revenue, units sold, and returns, which cut down the time spent putting reports together.

AI City Traffic Control System

Tech: Python, NumPy, Pandas, Matplotlib, Hugging Face

- Built a system to analyze traffic congestion across 10 simulated intersections.
- Used predictive analytics to adjust signal timing, which reduced simulated congestion by about 30%.
- Made 15+ visualizations of traffic patterns to check and explain how the model was performing.
- Deployed the model on Hugging Face Spaces so it could be tried out directly in the browser.

CERTIFICATIONS

GFG 160 DSA Challenge – GeeksforGeeks, Sep 2025

Python Programming – FrontEnd Masters, Oct 2025

PostgreSQL Database Management – CoursePe, Oct 2025

Intermediate Git – DataCamp, Dec 2024

ACHIEVEMENTS

- Ranked #1 in Programming among Amity University Online learners on GeeksforGeeks.
- Solved 160+ DSA problems on GeeksforGeeks over time, mostly outside of coursework.
